BC CONSTRUCTION STAT PACK FALL 2026

British Columbia's construction industry is facing growing economic uncertainty, with slowing construction, fewer job opportunities, and increasing pressure on businesses. For the first time since the COVID-19 era, the number of construction companies in BC has declined, with 205 businesses closing their doors. This has a significant impact on the construction workforce, as fewer employment opportunities and reduced hiring threaten workforce stability and the industry's ability to retain skilled workers.

Multi-unit residential construction continues to slow, with both housing starts and permits trending downward. However, rising industrial, commercial, and institutional (ICI) building permits offer some positive signs of continued investment.

The provincial government's decision to discontinue the Major Projects Inventory has also created a concerning gap in transparency. The loss of consistent reporting prevents direct comparisons with previous project trends and limits the industry's ability to plan with confidence.

As BC enters a new chapter of provincial leadership, BCCA continues to call for greater transparency and a predictable long-term infrastructure pipeline. Restoring certainty and business confidence will be critical to protecting jobs, supporting investment, and ensuring BC's construction industry can continue to build the province's future.
